## Instructions to Buy Bali Navigator Map

---

To buy Bali Navigator click [Online Store](#). Follow instructions to purchase Bali Navigator for Garmin GPS or Bali Navigator for Smart phones.

Once your payment has been confirmed you will receive an email with instructions for downloading and installing Bali Navigator.

Please ensure that you excluded [info@balinavigator.com](mailto:info@balinavigator.com) from your spam list.

### If You Have Purchased a Garmin GPS Read this First

To get the best from your Garmin GPS please ensure you have the latest software installed in your Garmin. To do this simply [download](#) and install Garmin Web Updater.

After Web Updater is installed connect your Garmin GPS to your computer using the cable provided (usually a standard USB cable) and Web Updater will automatically check to see that you have the latest software installed. If it is not the latest software Web Updater will download and install it in your Garmin GPS. Downloading and installing Garmin Web Updater need only be done once. However, you should check for new software updates every few months.

# Instructions to Download and Install Bali Navigator Map on Garmin GPS

---

## Installing Bali Navigator map in Garmin GPS Memory

We recommend that you install Bali Navigator in your Garmin GPS memory.

Step 1: Plug your Garmin GPS into your computer. The computer will add the Garmin as an external flash drive. Make a note of the drive letter (e.g. D, E, F etc). Note that for older models of Garmin e.g. eTrex and GPSMap60 you may first need to install MapSource software provided with your Garmin GPS so that the computer recognizes the Garmin GPS. If it was not provided with the Garmin GPS you will need to obtain it from [here](#).

Step 2: Browse to folder "garmin" on your Garmin GPS. Check to see whether there is a file called "gmapsupp.img" in the folder. If there is file "gmapsupp.img" it means that there is already a supplementary map in your Garmin. If "gmapsupp.img" is an earlier version of Bali Navigator map then simply delete it. If it is not Bali Navigator map you will need to copy the existing file "gmapsupp.img" to your computer. When you want to use it again you will need to replace "gmapsupp.img" with the original one. We have yet to come across a customer with an existing "gmapsupp.img" in their Garmin memory so it will be highly unlikely that you will especially if you have a new model of Garmin GPS. Alternately you can install another "gmapsupp.img" on your SD card ([see below for instructions](#)).

Step 3: Copy file "gmapsupp.img" to folder "garmin" on the Garmin GPS (see figure below). Note that if you already have a supplementary map in the Garmin and you have not deleted it you will be asked if you want to overwrite it. Double check that you have backed it up before overwriting it. Bali Navigator accepts no responsibility if you overwrite any existing supplementary map "gmapsupp.img".

1. Browse to folder "garmin" on your PC

2. Copy file "gmapsupp.img" to folder "garmin" on your Garmin

Step 4: Disconnect your Garmin GPS from the computer and turn it on..

## Installing Bali Navigator on SD Card

The more recent models of Garmin GPS come with an SD card or micro SD card.

Although we recommend that you install Bali Navigator map in Garmin memory it is also possible to install it on an SD card.

### SD Card Slot on Computer or Memory Card

We recommend that you install Bali Navigator on a BLANK SD card that is inserted into a slot on your computer / laptop or Memory Card rather than installing it on an SD card in your Garmin GPS.

To do this insert a blank SD card in your computer SD card slot or memory card reader if you do not have a SD card slot in your computer.

Copy folder "garmin" that was downloaded and unzipped to the SD Card. You should see folder "garmin" and in folder "garmin" file "gmapsupp.img" (see below):

SD Card with folder "garmin"

File "gmapsupp.img"

Remove your SD card from the computer or memory card reader and plug it into your Garmin GPS.

### **SD Card in the Garmin GPS**

If you do not have a SD card slot on your computer or do not have a memory card you can also install Bali Navigator map onto an SD card (or micro SD card) that is in your Garmin GPS. To do this first insert a blank SD card in your Garmin GPS (e.g. Nuvi). Some Garmin GPS (e.g. GarminMap 60 CSX) have micro SD cards that can be installed by opening the back cover and removing the batteries.

Connect your Garmin GPS to your computer using the cable supplied with the GPS.

Windows explorer should recognize the removable drives on the Garmin. Select the removable drive that has the SD card.

Copy file "gmapsupp.img" to folder "garmin" on the SD card.

Disconnect the Garmin GPS from the computer and turn it on.

*Note that computers do not recognize some older Garmin GPS models e.g. GPSTMap 60. For these older models you will need to copy "gmapsupp.img" to the SD card using a computer or memory card.*

## **Instructions to Download and Install Bali Navigator on Smart phones**

---

Bali Navigator is a Garmin locked map and will only run on Garmin GPS or smart phones and PDA's running Garmin Mobile XT.

The steps for installing Bali Navigator for Smart phones or PDA with inbuilt GPS are as follows:

Step 1. Install the latest version of Garmin Mobile XT.

If you have Symbian Operating System select one of the below:

- Garmin Mobile XT for Symbian S60 3rd Edition, Ver. 5.00.10, as of Oct 27, 2008, [Download](#)
- Garmin Mobile XT for Symbian UIQ3.0, Ver. 5.00.00, as of Aug 05, 2008, [Download](#)

If you have other operating systems select the appropriate version (select link below):

- Garmin Mobile XT for Palm , Ver. 5.00.10p, as of Sep 23, 2008, [Download](#)
- Garmin Mobile XT for Palm (for older devices), Ver. 4.10.30p, as of Nov 14, 2007, [Download](#)
- Garmin Mobile XT for Windows Mobile, Ver. 5.00.20w, as of Sep 25, 2008, [Download](#)
- Garmin Mobile XT for Windows Mobile (for older devices), Ver. 4.10.40w, as of Oct 12, 2007, [Download](#)

Also download the support (help) files:

- Garmin Mobile XT Support Files, Ver. 4.xx.xx, as of Jul 11, 2007, [Download](#)

Once downloaded connect your smart phone using the USB Cable. Make sure the USB connection mode is "Mass Storage" and NOT "computer Suite" (i.e. Connectivity > USB > Mass Storage).

Select the correct removable drive and install **Garmin Mobile XT** and **Garmin Mobile XT Support Files**, Ver. 4.xx.xx, as of Jul 11, 2007

Step 2: Run Garmin Mobile XT.

- Select Settings > About > Device ID
- Write down the ten (10) digit Unlock ESN

When you have done this send an email to [info@balinavigator.com](mailto:info@balinavigator.com). In your email make sure you include:

- Smart phone make and model
- Ten (10) digit Unlock ESN

After this is done you will receive an email with a link to your Bali Navigator Map as well as instructions.

**Step 3:** Download the map and unzip

**Step 4:** Copy three files: “gmapsup2.img”, “sw.unl”, and “gmapsup2.unl” to folder “garmin” on your smart phone.

**Step 5:** You will have to enable the attached/built in GPS. To do this select the top left hand corner icon in Garmin Mobile XT (satellites). Under GPS Information select (2) Use Attached / Built-in GPS

**That’s it! You are ready to navigate and enjoy the real Bali off the beaten track.**

## IMPORTANT NOTES PLEASE READ!!

---

One problem we are finding with installation is that some customers copy the zip file to the Garmin Edge but do not unzip it. This usually happens with Windows XP which can view zipped files. The Garmin GPS will not recognize zipped files.

To check that all went well navigate to your Garmin Edge using Windows Explorer. You should see folder “garmin” and inside folder “garmin” you should see the file “gmapsup2.img”. It MUST NOT be a zip file.

Another problem that has been reported is that POI (Points Of Interest) and roads for Bali cannot be found. This problem is experienced by customers who purchase Bali Navigator outside Bali and try to find POI or roads in Bali when they are in Europe or Australia etc. Because the Garmin has the base map of the world, and possibly Australia and NZ map, Europe or North America AND Bali Navigator there are 100,000’s of POI and roads. The Garmin GPS has limitations on searching which can causes problems when searching for POI and roads in Bali when you are not in Bali. Once you are in Bali all will work well.

Please notice that although you can search by address including house number the Garmin will navigate you to the start of the road regardless of the house number you entered. This is not a limitation of Bali Navigator map but is due to the fact that Indonesia does not have systematic house numbering as found in other countries such as the US, Canada, Australia and Europe.

## Still Having Problems?
